

Transcript of media clips for Device Table innovation

Mary Marvin, advanced practice registered nurse, surgery, OSF HealthCare Saint Francis Medical Center

Saves patient inconvenience of rescheduling surgery

“Doing all his work upfront, we save the patient the misfortune of being cancelled. A lot of times the patient’s family will come in to be with them; to take care of them after the case. If there’s a cancellation and it doesn’t get re-scheduled for another three weeks, then their family member has already used their vacation time and they have no one to take care of them after the surgery.” (:21)

Likes the idea of having a lasting impact on patients and safety.

“The thought that someday someone in California or New York could be protecting their patients by utilizing our app is something that is very special to us because as nurses, taking care of the patient always comes first.”

Jill Teubel (pronounced TOO-bull), surgery nurse, OSF HealthCare Saint Francis Medical Center

Looking forward to licensing the software for Device Table.

“It was a solution we solved for our surgery area, and it’s been neat to work with the physicians and staff. For them to come back to us and say, ‘This really helps us. We use this all the time,’ that’s really satisfying because as a nurse, you go into the profession to help people.” (:19)

Becky Buchen, Senior Vice President for OSF Innovation

Creating an innovation ecosystem can help advance Mission Partner’s great ideas.

“When you really start to leverage the ideas they have, because they’re at the frontline of care, they’re seeing the challenges being faced every day, whether it’s by our patients or their fellow Mission Partners (employees), and then bringing forward those ideas really starts to advance the transformation of health care.” (:22)
