

# Script – Print – Staying True to Your Food Resolutions

## Setting Specific Goals Key to Long-Term Success

It's that time of the year again when we turn our backs on past mistakes and pledge to do better. We're talking about News Year's resolutions.

Some people will promise to quit smoking, exercise more frequently or maybe plan to reunite with long lost friends or loved ones. But about this time every year one of the most talked-about resolutions is to improve our diets and perhaps lose weight.

While most people are more than ready to put 2022 in the rearview mirror, what are the best ways to go about making our food-related resolutions attainable now that 2023 is here?

"We have to make them realistic," says Adam Schafer, a clinical dietitian with OSF HealthCare. "A lot of times people say I want to eat healthier or be healthier. There are no specifics to that. We need to make sure resolutions are very specific and that you can measure it rather than throwing something out there that has no real meaning to it."

The keys to sticking with your food resolutions include setting specific goals, measuring those goals, and having a plan to meet those goals. Schafer recommends setting S.M.A.R.T. goals (Specific, Measurable, Attainable, Realistic, Time-bound). The best ways to change behaviors is to focus on small, achievable habits and activities that will help improve your health over time.

When it comes to eating habits, there are going to be good times and bad. No one is perfect. Schafer says the key is to not beat yourself up over a bad eating day here or there. If you do stumble occasionally, reflect on what you did wrong and move on without any regrets.

If one of your resolutions is to lose weight, Schafer recommends thinking about what did or didn't work in the past before setting your weight loss goal. Rather than concentrating on a certain number, think about things like your clothes fitting better, or your ability to do certain activities easier or better. These milestones will help you maintain a more positive mindset and keep you motivated to stay the course.

"Focus more than just on weight," says Schafer. "A lot of times we focus on a certain number when it comes to weight loss, but if you're exercising too you may be putting on muscle. It's not going to reflect well on the scale and you're going to assume you're not doing well and you're going to quit."

Other tips include:

- Fill up on fruits and vegetables
- Drink more water
- Watch your sodium intake
- Plan your meals
- Keep a food log

And if you don't set goals early in 2023, don't sweat it. There's never a bad time to get started on making healthy lifestyle changes. Proper nutrition isn't a quick fix, Schafer says. It's a habit that we will work to develop for the rest of our lives.

"It's never too late to get started on one," he adds. "If you feel like you missed the New Year resolution time frame, there is always time to improve on yourself, whether it's related to diet and health or anything else in life."
