

Jennifer Junis - Senior Vice President, Saint Gabriel Digital Health – OSF HealthCare

Having access to an OSF Urgo even more important in the wake of the COVID pandemic

As we looked at the modern urgent care platform, it really was to meet our communities where and when they wanted to receive care and, more important now with the pandemic, that we are located in areas that are convenient there in our communities and that we are open and available to them on when they need us. :22

OSF Urgo offers occupational medicine services

We also do occupational medicine, so we do drug testing and physicals, anything that really that you wake up that one day and you don't feel well and think 'I need to see someone' is a great time to come to Urgo. :14

OSF Urgo offers quick access to care and are following all cleaning protocols

We are able to get you in and out very quickly, treat you with kindness and compassion and take you right into a room without long waiting room waits. We're able to socially distance and we are taking all the precautions that our system does to really make sure that you are protected and our caregivers are protected. :25

Can be triaged ahead of time and make an appointment

On our website we have Clare which is a chat bot that you can put your symptoms in to see if you need to come to Urgo or not and then you're also able to just make an appointment right there as well and put your symptoms in so that we know what to expect when you're coming so that we can make sure that we are protected and you're protected. :20
